Title	: The Determination of Iron and Aluminum in Their Binary Mixtures	
Crit. Pub.	: Rev Chim, 9, No 10, 577-578 (1958)	
Abstract	: A modified benzoate method (RZhKhim, No 16, 1956, 5112?) is used for the determination of Al(3+) in binary mixtures with Fe(3+); the procedure is based on the preliminary separation of Fe(3+) by precipitation as Fe(OH) <sub>3</sub> with excess NaOH (rather than reduction to Fe(2+)). The solution to be analyzed, containing Fe(3+) and Al(3+), is diluted with water to 150 ml and heated to boiling, after which an excess of 2N NaOH is added. The Fe(OH) <sub>3</sub> precipitate which is formed is filtered, washed

Title : Weed Plants on the Pastures and Meadows of Croatia

Orig Pub : Zashtita bilja, 1956, No 27, 55-68

Abstract : Classification is cited of 400 species of weeds widespread on the croatian meadows and pastures in the continental and Meditarranean regions. Weeds are divided according to Koenig into 11 groups: 1 - worthless plants, harmful for cattle; 2 - valuable but irksome when very widespread; 3 - very widespread, partially well consumed by cattle but hindering the mechanized tillage of the soil; 4 - moderately widespread weeds, harmless for cattle; 5 - plants producing little green bulk, in most cases eaten by cattle reluctantly; 6 - thermophilic and xerophilous weeds; 7 - low growing

(Historical sketch of meteorological observations.) Yugoslav.  
Hidrometeoroloska Služba, Hidrometeoroloski Glasnik, 1(1):35-46  
1948. In Croatian. DNB-Evidence of astronomical and meteorological  
observation is traced back as far as 4000 B.C. Communications of  
meteorological interest are found in ancient Greek, Roman and Medieval  
literature. Scientists and explorers of the 17th century are mentioned.  
An international network of meteorological stations was organized in  
1654 by Italians. A brief survey of the development of European net-  
works, particularly those in the territory of the present Yugoslavia,  
is made. Objectives, methods and means and organisational problems  
of modern meteorological observatories and 1 st to 4 th class  
stations are discussed in Sec. 2 of the article. Subject Headings:

[Some climatic characteristics of the East Adriatic Sea and adjoining hinterland.] *Geofisica Pura e Applicata*, 21:147-158, 1952. 4 figs., 4 tables, refs. English summary p. 147-158. MIH-BH—In order to describe more precisely the climate of the eastern Adriatic coast and of the adjoining northwestern hinterland of the Balkan peninsula, the author determined the sea level distribution of temperature using a ten year mean of 250 stations and analyzed the annual temperature variations. Charts show Jan., July and mean annual isotherms and data on the mean monthly and annual temp. (50 years mean) and mean absolute temp.; extremes for typical stations along the coast and hinterland are presented. The extremes of a fairly developed center of warmth over the southern portion of the coast and of well developed cold areas behind the high ridge of the Dinaric mountains are distinguished and their difference is explained by the influence of the sea water and intrusion of cold air masses respectively. Subject Headings: 1. Coastal climates 2. Temperature variations 3. Adriatic Sea—I.L.D.

and dissemination of data, undertaken by the Yugoslav Hydro-meteorological Service, is  
described. Data on daily observations are treated monthly at the state hydro-meteorological  
services (directly from major stations, and through section centers from rainfall stations).  
The author describes the method of computation and control applied to the data before they  
are published in the monthly and annual reports. Subject Heading: 1. Data processing—G.

Kovacevic, O.Z.

✓ Fluorescent uranium glass. O. Z. Kovacevic and V. M. Kosnic. Bull. Inst. Nuclear Sci., Belgrade, 5, 49-62 (1956); abstracted in J. Appl. Chem. (London), 5 [10] 6-19 (1956).—The MT glass  $4\text{SiO}_2 \cdot \text{Na}_2\text{O} \cdot \text{K}_2\text{O}$ , colored with 10% uranyl nitrate hexahydrate, was melted in a sintered alumina crucible at  $1200^\circ$  for 6 to 8 hr. It had  $n^2 = 1.6502$  and a wide absorption band in the ultraviolet, decreasing toward the visible region. A plate 0.8 mm. thick was successfully used to detect the fission pulses  $^{10}{}_{\text{Be}}(\text{d}, \nu)^{10}{}_{\text{Be}}$ , the fluorescence being measured by an E.M.I. 6250 photomultiplier (secondary radiations were eliminated by using an 18 v. bias). The thermal neutron flux of  $\text{U}^{235}$  at a distance of 30 cm. was  $4.8 \cdot 10^4$ /cm.<sup>2</sup>/sec. and was measurable with an accuracy of 1%. V.P.K.

1074  
PRODUCTION OF CARBON FREE RADACTIVE 7500-

REPORT BY DR. ROBERT J. KIRK AND RALPH M. SPALDING,  
SOLID STATE PHYSICS LABORATORY, KODAK, ROCHESTER, N.Y.

1955 V  
The production of carbon free radioactive  $^{14}C$  from the  
radioactive isotope  $^{14}N$  has been described in the literature.<sup>1</sup> The distribution of  $^{14}C$  among the  
products of the nuclear fission of  $^{235}U$  has been determined.<sup>2</sup> The  
radioactive products of the fission of  $^{235}U$  contain about three times the amount of  
 $^{14}C$  as the radioactive  $^{14}N$  produced in the same  
reaction. The radioactive  $^{14}C$  produced in the fission  
of  $^{235}U$  is used for biological purposes in the form of water  
and organic compounds. (cont)

KOVACEVIC, O.Z.

/ Separation of carrier-free  $\text{P}^{31}$  from elementary sulfur on a  
silica gel column. Olga Z. Jovanović-Kovacevic (Inst.  
Nuclear Sci., Boris Kidrič, Belgrade, Yugoslavia). Bull.  
Inst. Nuclear Sci. "Boris Kidrič" (Belgrade) 10, 51-9  
(1960).—S is converted into the  $\alpha$  form by crystn. from a  
mixt. contg. equal vols. of xylene, toluene,  $\text{CHCl}_3$ , and tri-  
chloroethylene. The  $\text{P}^{31}$  produced on neutron bombardment  
 $\text{S}^{31}(n,\delta)\text{P}^{31}$  can be sepd. carrier-free. S is dissolved  
in  $\text{CS}_2$  and passed through a pretreated silica gel column,  
and washed with  $\text{CS}_2$ .  $\text{P}^{31}$  is eluted with 5*N*  $\text{HNO}_3$ . The  
yield is 80%. James C. Sullivan

KOVACEVIC, Pavano

The agropedological map of the Sisak district [Western Croatia]. Pavao Kovacevic and Matijica Zivan (Agricul. Inst., Zagreb, Yugoslavia). Zemljiste i Biljka 1, 10-37(1952).—A pedological paper. Of chief interest are the tabulations of pH values for various depth, also the facts that the region, mostly in greater depths, contains so much  $\text{CaCO}_3$  that the soil upon treatment with HCl will bubble with development of  $\text{CO}_2$ . In order to furnish better agricultural results the soils of this region must be heavily fertilized with  $\text{CaO}$  and K-P-N fertilizers. W. J.
